

Disposable Bailers provide a simple and effective way of collecting samples from monitoring wells, avoiding the possibility of cross contamination of samples.

Each bailer is certified to the utmost in cleanliness and then individually sealed to provide sample integrity.

Bailers are made from opaque polyethylene and offer a low-cost alternative to re-usable bailers or groundwater sampling pumps.

Applications

- Collection of contamination free samples from monitoring wells

Features

- Simple to use
- Easy empty top design
- Prevents cross contamination
- Clean and sealed
- Tough materials
- High quality control
