

Loop Weights are used to aid the installation of Thermo-Loops® in deep boreholes, difficult ground conditions, tight boreholes or where the viscosity of the borehole fluid means that the loop will not fall under its own weight.

Their slim design with a conical toe to ensures smooth and easy installation of the Thermo-Loops®. They can also be bolted together for additional weight if required.

Manufactured from recycled cast iron with an outside diameter of 70mm, weighing 40kg.

## Applications

- Geothermal Loop installations

## Features

- Cast iron construction
- Slimline design
