

Post Mix is a quick and easy solution for providing a solid foundation for products such as security covers as well as flush and upright covers, marker posts and bollards. No mixing is required, and you only need to add water.

Post Mix has been tested in accordance with specific procedures to ensure compliance and subject to the controls of BS EN ISO 9001 quality approved system.

Applications

- Fixing for covers, posts and bollards

Guide

- Do not mix with any other cement product
- Put the cover or post into the desired position
- Empty the Post Mix into the area around the cover or post, ideally covering half of the area needed for fixing
- Pour clean water directly onto the Post Mix until the water ceases to soak away
- Empty more Post Mix as required and pour clean water again until the water ceases to soak away
- Setting should take approximately 5-10 minutes depending on the ambient temperature

Features

- No premixing required
- Just add water
- Sets in 10-15 minutes

Storage

- For best results the material should be stored clear of the ground, unopened and covered

Packaging

- 20kg waterproof bags
