

Where a traditional soakaway is not practical due to geological or site conditions, a deep bore soakaway provides a practical alternative.

The water is transported from a sealed storage chamber to a borehole comprising of a steel or plastic liner with a slotted section to allow the percolation of water into the natural ground.

The top of a borehole soakaway is fitted with a siphon head to channel water into the borehole while preventing the ingress of debris such as leaves.

Manufactured from heavy duty galvanised steel they are easily fitted and can be removed for maintenance if required.

Applications

- Deep borehole soakaways

Features

- Easy to install & remove
- Heavy duty construction
- Galvanised finish
- Suitable for PVC & HDPE casing

Specifications	
Material	Galvanised steel
PVC Well Casing Sizes (mm)	113, 125, 140, 165, & 225
HDPE Well Casing Sizes (mm)	110, 125, 140, 160, 200 & 225
Height (mm)	300
Outside Diameter of Siphon	250, 265, 280, 585, 365

*Other dimensions are available on request.
